

TECH TIPS

FUEL PRESSURE SENSOR

CONNECTOR + SENSOR KIT | ASSEMBLY RECOMMENDATIONS

Why change the sensor and its connector simultaneously?

Vehicle **vibrations** cause **wear/cracking** of the wiring harness connected to the ECU.
Consequences: **short circuits**, sporadic or missing sensor signal > erroneous data > faulty function.

The engine **environment** (oil, humidity, heat) causes **oxidation** of the **connector tabs**.

In order to avoid **further repairs** (**additional costs** and **loss of time**), we recommend **replacing the sensor and its connector** sold in kit (ref. **1473501K**) or **separately** (ref. **170070** + **1473511/1473512/1473521**).

1/ COMPLETE KIT (Ref. 1473501K)

2/ KITS SOLD SEPARATELY

170070

1473511

1473512

1473521

The connector and the sensor must be **purchased separately**.
