## EXHAUST PRESSURE SENSOR

### REF. 1479001K | ASSEMBLY EVOLUTION

The evolution of the original assembly led to a change of the sensor reference, due to the modification of the shape of the connector, in particular the positioning of the tabs:

#### OEM REF. 223651719R

RECTANGULAR CONNECTOR WITH  
ALIGNED TABS

**This reference doesn't exist anymore (including from Renault).  
It is replaced by the 1479001K kit.**

#### OEM REF. 8201000764

ASSEMBLY OF THE KIT:  
SENSOR (OEM REF. 8201000764)  
+ CABLING (OEM REF. 8201428503)

New positioning of the pins  
in **triangle**

We have recently changed the sensor in the kit from blue to black.  
This change does not affect the assembly of the product.

#### KIT 1479001K:

Sensor 1479001

Cabling and heat-shrinkable sheaths

This wiring allows the fitting of the new sensor instead of the old model.  
Among the most common applications, the following vehicles can be found: Megane et Scenic 3, 1.5 dCi.
